

STAINLESS STEEL HEPA/ULPA FILTERS

Laminar Flow Hepa Filter

A J Manufacturing provides **HEPA** and **ULPA** filters as options for our stainless steel laminar flow or any combination grille, plaster frame and plenum models in hinged or non-hinged models.

HEPA filters have 99.99% minimum removal efficiency on 0.3 micrometer particle size.

ULPA filters have 99.9995% minimum removal efficiency on 0.12 micrometer particle size.

Standard filters are made in an anodized aluminum Gel Seal frame that mates with a specially constructed knife-edge frame built into our diffusers that provides a leak-tight connection. Applications include hospitals, clean rooms, food processing, pharmaceutical and research facilities.
